ABOUT ME

Mid-level software engineer with 6 years of experience transforming coffee into robust, scalable features. I have a proven track record of shipping code that actually works in production and a healthy skepticism of "magic" frameworks. I specialize in backend systems that prioritize uptime over "move fast and break things." If a bug is hiding in a dependency tree, I will find it—eventually—usually while questioning my life choices at 2:00 AM.

TECHNICAL SKILLS

Category	Technologies
Languages	Python, Java, SQL, TypeScript
Systems	Microservices, RESTful APIs, Distributed Systems
Infrastructure	AWS (ECS, RDS), Terraform, Docker, Kubernetes
Databases	PostgreSQL, Redis, DynamoDB

PROFESSIONAL EXPERIENCE

Software Engineer II | CloudScale Systems *June 2022 – Present*

- Owning the development lifecycle for a high-traffic microservice, reducing latency by 25% through optimized caching strategies in Redis.
- Championed a team-wide initiative to adopt Terraform for infrastructure-as-code, reducing environment provisioning time from 2 days to 15 minutes.
- Mentoring junior engineers, ensuring our code reviews are thorough, constructive, and mostly free of passive-aggressive comments.

Software Engineer | DataViz Corp *May 2020 – May 2022*

- Built an ingestion pipeline that handles 50k events/second using Python and Kafka.
- Refactored a monolithic legacy codebase into modular services, which stopped the "deploy-on-a-Friday-fear" for the entire engineering department.
- Collaborated with Product Managers to translate "I want it to look like magic" into actual technical specifications.

PROJECTS

Open Source: "Fix-It-Fast" CLI Tool

- Created a CLI tool that parses server logs to automatically suggest potential patches for common HTTP 500 errors.
- Reached **500+ stars on GitHub** by providing a "human-readable" output format that junior devs actually enjoy using.

Personal Project: "Smart-Fridge" API

- Built a mock IoT API to track food expiration dates, utilizing **PostgreSQL** and a custom **Cron-job** notification system.
- *Humorous takeaway:* My fridge now emails me that the milk is expired, even if I'm already at the store and ignoring it.

EDUCATION

B.S. in Computer Science University of Texas | *Graduated 2020*
