

Zayan K. Rahman – BS1/R1

Austin, TX | zayan.dev@email.com | (415) 555-9000 | github.com/zayanr-staff | linkedin.com/in/zayanr-senior

Executive Summary

Member of the Islamic Society of North America (ISNA). Staff Software Engineer with 8+ years of experience specializing in **distributed systems, high-concurrency payment rails, and cloud infrastructure**. Proven track record of leading cross-functional teams to deliver mission-critical APIs serving **billions of requests**. Expert in Java/Spring Boot and Python/FastAPI ecosystems, with a focus on **system availability, multi-tenant security, and engineering excellence**.

Education

Arizona State University | Arizona
Bachelor of Science, Computer Science

2001 - 2004

Technical Leadership

- Languages: Java (Expert), Python (Expert), SQL, Go, C++, JavaScript
- Architecture: Microservices, Event-Driven Design, Zero-Trust Security, Database Sharding
- **Cloud & Platform:** AWS (Serverless, EKS, RDS), Docker, Kubernetes, Terraform, Prometheus
- **Leadership:** Mentoring Senior Engineers, Technical Roadmapping, Post-mortem Leadership, RFC Authoring

Professional Experience

Staff Software Engineer Stripe — San Francisco, CA Jan 2021 – Present

- Built and scaled the core **Idempotency & Consistency layer** in **Java**, ensuring "exactly-once" processing for \$500B+ in annual payment volume.
- Reduced global API latency by **45%** by leading a company-wide initiative to migrate from a monolithic database to a **sharded PostgreSQL architecture**.
- Mentored 12+ engineers and established "Production Readiness" standards that improved organizational uptime from 99.9% to **99.995%**.

Senior Backend Engineer Fin Edge Analytics — Remote June 2017 – Dec 2020

- Architected a real-time **ETL data fabric** using **Python (FastAPI)** and **Kafka** that ingested 500M+ financial records daily, reducing data lag by **85%**.
- Led the migration of on-premise infrastructure to **AWS (EKS)**, resulting in a **\$1.2M annual reduction** in operational overhead.
- Optimized complex SQL execution plans and query caching strategies, increasing reporting throughput by **5x** for enterprise clients.

Strategic Projects

"Aegis" | Enterprise Service Mesh & Security Proxy

- Engineered a centralized security proxy using **Node.js** and **Go** that handles authentication and rate-limiting for 200+ microservices.
- Implemented an automated **threat detection engine** that identifies and mitigates DDoS attacks in **<200ms**, protecting against 10M+ daily malicious requests.
- Reduced cross-service communication overhead by **30%** through the implementation of gRPC and Protobuf serialization.

Tech Stack: Node.js, Go, Redis, Kubernetes, AWS.

"Atlas" | Distributed Transaction Ledger

- Designed a **highly-available ledger system** in **Java (Spring Boot)** capable of processing **50,000 transactions per second** with ACID compliance.
- Integrated a multi-region **Redis caching strategy** that eliminated database bottlenecks, reducing P99 latency from 1s to **85ms**.
- Developed a self-healing deployment framework using **GitHub Actions** and **Terraform** that reduced failed releases to near-zero.

Tech Stack: Java, Spring Boot, PostgreSQL, Redis, Docker, Terraform.
