

Jennifer Sloan

Denver, CO | jsloan@example.com | github.com/jsloan | linkedin.com/in/jsloan

SUMMARY

- Senior software engineer with 8 years of professional experience building healthcare claims platforms. She owns services end to end, from schema design through deployment and on-call, and she mentors engineers and leads delivery for a team of four.

EDUCATION

- Colorado State University · Master of Science in Computer Science, 2019
- Colorado State University · Bachelor of Science in Computer Science, 2017

EXPERIENCE

Senior Software Engineer | Meridian Health Data | Denver, CO | 2021 - Present

- Lead engineer on the healthcare claims services platform, written in Java (Spring Boot), serving 40M+ requests per month.
- Designed and maintained 30+ production REST API endpoints over six years, including versioning, pagination and rate limiting.
- Own the SQL Server schema for the core transaction store, including partitioning and index tuning that cut P95 query time from 780ms to 110ms.
- Migrated the platform to Docker containers on Kubernetes, cutting deploy time from 45 minutes to 6 and enabling zero-downtime releases.
- Built the event pipeline on Apache Kafka, processing 12M+ messages per day with idempotent consumers and a dead-letter workflow.
- Maintain the GitHub Actions build and release pipelines for eight repositories, including automated test gates and staged rollout.
- Formally mentor three junior engineers · two of her mentees have since been promoted · run the team's code review standard, and lead a project team of four.

Software Engineer | Front Range Clinical | Denver, CO | 2017 - 2021

- Built backend services in Java against SQL Server, growing the automated test suite from 12% to 84% line coverage across unit and integration tests.
- Ran production workloads on Amazon Web Services for four years, including managed compute, object storage and secret management.
- Reviewed 400+ pull requests and established the team's Git branching model.

SKILLS

- Languages: Java, SQL, Bash, TypeScript
- Data: SQL Server, Redis, schema design, query tuning
- Platform: Docker, Kubernetes, Amazon Web Services, GitHub Actions, Apache Kafka
- Practice: Git, pull request review, unit and integration testing, on-call

COMMUNITY

- Volunteer, Denver Community Center food pantry · weekend shift, stocking and distribution, roughly six hours a month since 2023.
